Batch-dependent negative sampling and marginal-preserving decoy construction in TCR–peptide benchmarks

Sharon Melhi and Rajat Bhardwaj*

Amity School of Engineering and Technology,
Amity University Bengaluru, Bengaluru, India

*Corresponding author: rajat@blr.amity.edu

Target journal: Network Modeling Analysis in Health Informatics and Bioinformatics

Article type: Original research

Requested publication route: Subscription publication

Keywords: T-cell receptor; negative sampling; benchmark integrity; HLA; constrained assignment; reproducibility

Author information

Names, order and institutional affiliation follow the authors' supplied instructions. Honorifics are omitted from the publication byline. The corresponding author and email are retained from the supplied manuscript and should be checked before upload.

Declarations requiring author input

Funding, competing interests, actual author contributions and any acknowledgments must be supplied by the authors before submission. An editable author-declarations form accompanies this package. Submission eligibility and approval of the final manuscript by both authors also require confirmation.
