Author verification required. Names, order, affiliation and contact are transcribed from the supplied manuscript and require confirmation for this substantially revised study. This title page is separate from the anonymous manuscript.

Statements to complete before submission

Funding: Author-confirmed funding sources, grant numbers, or an accurate no-funding statement.

Competing interests: Author-confirmed financial and non-financial interests, or an accurate absence-of-interests declaration.

Author contributions: Actual human contributions to conceptualization, data curation, methodology, software, validation, analysis, visualization, drafting, review and supervision. Do not assign activities without agreement.

Acknowledgments: People and organizations to acknowledge with appropriate consent, if applicable.

Ethics: The executed study reanalyses public records and synthetic decoys without new participant or animal experiments. Confirm applicable institutional and journal requirements; no approval number or exemption has been invented.

AI assistance: ChatGPT assisted source inspection, code development, computational analyses, reviewer-role stress testing and drafting. Human authors must verify the evidence, interpretation and text and accept responsibility before submission.

Publication status: Confirm the work is eligible for submission and is not concurrently under consideration elsewhere. The source README contains an earlier under-review statement whose current accuracy is unknown.

Editor-only provenance: The audited research implementation is `https://github.com/Sharon-codes/Precision-Oncology`.

Pinned commit:

`0ba2d538065e2d3a8b4642547eb77447ecc89a5b`.

The full author archive preserves source licenses, fingerprints, executed outputs and reviewer-role reports. This identifies the source and should be handled according to the journal's double-anonymous review policy.
